

Lab-3

Question-1

“Already up to date.”

`git pull` retrieves and integrates new commits from the remote repository. Local file changes alone do not make the remote branch “newer,” so `git pull` can still report “Already up to date.”

Question-2 & 3

We run `install.packages()` in the Console because we usually only need to install a package once on a computer or R environment. After the package is installed, we use `library()` to load the package into the current R session so we can use its functions. This is also why we put `library()` in a `.qmd` file: the package needs to be loaded each time the document is rendered.

Question-4

```
palmerpenguins::penguins
```

```
# A tibble: 344 x 8
  species island bill_length_mm bill_depth_mm flipper_length_mm body_mass_g
  <fct>   <fct>         <dbl>         <dbl>           <int>         <int>
1 Adelie Torgersen     39.1           18.7             181           3750
2 Adelie Torgersen     39.5           17.4             186           3800
3 Adelie Torgersen     40.3           18              195           3250
4 Adelie Torgersen     NA              NA              NA            NA
5 Adelie Torgersen     36.7           19.3             193           3450
6 Adelie Torgersen     39.3           20.6             190           3650
```

```

 7 Adelie Torgersen      38.9      17.8      181      3625
 8 Adelie Torgersen      39.2      19.6      195      4675
 9 Adelie Torgersen      34.1      18.1      193      3475
10 Adelie Torgersen      42       20.2      190      4250
# i 334 more rows
# i 2 more variables: sex <fct>, year <int>

```

We don't have the package `palmerpenguin` installed in our environment.

Question-5

The first friend is correct. The original code used `palmerpenguins::`, which already tells R which package to use, so `library(palmerpenguins)` is unnecessary.

Question-6

```

# Use message=FALSE to hide the warning message
library(dplyr)

```

Question-7

```

iris2 <- arrange(iris, Petal.Length)
head(iris2)

```

	Sepal.Length	Sepal.Width	Petal.Length	Petal.Width	Species
1	4.6	3.6	1.0	0.2	setosa
2	4.3	3.0	1.1	0.1	setosa
3	5.8	4.0	1.2	0.2	setosa
4	5.0	3.2	1.2	0.2	setosa
5	4.7	3.2	1.3	0.2	setosa
6	5.4	3.9	1.3	0.4	setosa

Question-8

The screenshot shows the GitHub interface for the repository 'MatchaParfaitNeko' / 'ST115-Lab-3'. The 'Commits' tab is selected, showing a list of commits on the 'main' branch. The commits are filtered by 'All users' and 'All time'. The commit history shows two commits:

- Finished Lab question 1-7**
MatchaParfaitNeko committed 1 minute ago
Author: 9eafb90
- Initial commit**
MatchaParfaitNeko authored 29 minutes ago
